

MAX SAUNDERS

Groveland, FL | 863-944-9498 | saunders.max.k@gmail.com
<https://github.com/MaxSaunders> | <https://www.saunders.wiki/>

Seasoned App Development Engineer with a four-year track record across multiple companies, showcasing adaptability and a client-centric approach within specialized teams. Proficient in spearheading diverse projects, spanning greenfield developments, system modernizations, and architecture migrations. Adept at close collaboration with clients, leveraging extensive technical expertise to deliver tailored, top-tier solutions that consistently exceed expectations.

WORK EXPERIENCE

Software Engineer - AppDev

1 year | Mission Cloud Services | Remote (Based in California)

- Collaborated as a key member of a dedicated team within Mission, focusing on customized client solutions.
- Led or contributed to a range of projects, from greenfield developments to modernizing existing systems and transitioning architectures.

I worked closely with clients to understand their specific needs and delivered tailored solutions that met and exceeded their expectations. I successfully handled a dynamic workload, adjusting to the unique requirements of each project and consistently delivering high-quality results and leveraged deep technical knowledge and skills to architect, develop, and implement solutions that optimized client systems and workflows.

Software Engineer - Platform

1 year | Asurion | Remote (Based in Virginia)

- I collaborated within a small team of engineers focused on maintaining and enhancing our company's primary agent portal.
- Our main objective was to enhance both user and developer experiences through comprehensive optimizations.
- I led multiple front-end design projects that included designing a new portal for our agents to register and manage clients as well as implementing Contentful into our front-end design process for an existing project

Software Developer - Full Stack

2 years | Auto Data Direct | Tallahassee, FL

- I worked on a small team of developers that would build products for the company to sell to their clients and applications for the company to track administration tasks and information.
- I lead a number of projects such as designing an email service that would send and track all emails sent from our projects as well as a reporting system that allowed our admin users to run reports on our database
- Awarded Rookie of the Year and Employee of the Month
